CommunicationsResource

POST /communications

createCommunications (**createCommunicationsUsingPOST**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

communications **Communications** (required)
Body Parameter — communications

Return type
EntityModel«Communications»

Example data

Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

DELETE /communications/{communicationId}

deleteCommunications (**deleteCommunicationsUsingDELETE**)

Path parameters

communicationId (required)
Path Parameter — communicationId

Return type
Object

Example data
Content-Type: application/json

```
"{}"
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

POST /communications/search

searchForCommunications (**searchForCommunicationsUsingPOST**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

search **object** (required)
Body Parameter — search

Return type
CollectionModel«List«Communications»»

Example data
Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

PUT /communications/{communicationId}

updateCommunications (**updateCommunicationsUsingPUT**)

Path parameters

communicationId (required)
Path Parameter — communicationId

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

communications Communications (required)
Body Parameter — communications

Return type
Object

Example data
Content-Type: application/json

```
"{}"
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

ConversationsResource

POST /conversations

createConversations (**createConversationsUsingPOST**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

conversations Conversations (required)
Body Parameter — conversations

Return type
EntityModel«Conversations»

Example data
Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

StatusResource

POST /status

createStatus (**createStatusUsingPOST**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

statuses [Status](#) (required)
Body Parameter — statuses

Return type
EntityModel«Status»

Example data
Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

ConversationController

WEBSOCKET /state

setConversationState (**setConversationStateUsingWebsocket**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

status [Status](#) (required)
Body Parameter — status

Return type
void

Example data
Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json

WEBSOCKET /conversations/{conversationId}/sendMessage

sendCommunicationMessage (**sendCommunicationMessageUsingWebsocket**)

Consumes
This API call consumes the following media types via the Content-Type request header:

- application/json

Request body

communications [Communications](#) (required)
Body Parameter — communications

Return type
void

Example data
Content-Type: application/json

```
""
```

Produces
This API call produces the following media types according to the Accept request header; the media type will be conveyed by the Content-Type response header.

- application/json
